## Solisco @ The Energy Show 2017 - Who's Who On Our Stand

To embrace the most important source of energy for life on earth by creating innovative solutions that drive us towards a sustainable future

OUR European PARTNERS

A Collaboration of Supreme Quality

We have sourced the premium market leading Solar and Battery Storage systems as well as pioneers in EV charging systems to co-create an outstanding, exclusive product with German and Danish manufacturers of carports GEWA and BlueTop.

Bobbie -

With nearly 20 years of production experience under its belt, SOLARWATT GmbH ranks among the pioneers of the German solar-energy industry. What started in 1993 as a two-person company is now one of the nation's leading manufacturers of solar modules – a provider of intelligent energy solutions for both private and commercial uses.

SOLARWATT has received the prestigious “ees Award 2017” for its new MyReserve Matrix battery.

Solisco Solar EV-Ports are equipped with high-quality German made SOLARWATT glass-glass, maximum yield solar modules that have 30 years product and performance warranty. They are especially long-lasting, durable and extremely resistant to external influences. The panels, inverter and energy management system are all German made and all elements are fine-tuned and optimized for best efficiency. As an option, you can include a battery storage system such as SOLARWATT or SONNEN to further elevate your Solar EV-Port and gain more independence from the power grid.

Michael -

MENNEKES is a leading manufacturer of standardised industrial plugs and sockets with subsidiaries and agencies in over 90 countries.

Solisco Solar EV-Ports are equipped with one or more of the latest MENNEKES Amtron EV charge stations. These charge points use smart technology and can be set to only charge your car only with solar power generated by the PV system thus reducing your carbon footprint to zero. Alternatively, they can be programmed to charge at certain times, in order to benefit from lower tariffs, set by your energy provider and they can also be operated by the Mennekes charge-app on your smart phone.

Matt -

Drivenergy grew out of the growing demand for scalable, intelligent charging infrastructure coupled with renewable energy on all scales. Now working with Mennekes, the leading name in charging components, to market their range of charging points in the UK, Drivenergy has introduced Amtron to the UK with grant support from OLEV.

“I see great opportunities in the convergence of renewable generation, on all scales, with the move towards greater numbers of plug-in vehicles, especially the longer-range yet affordable EVs now coming to market. Marrying the two together in an intelligent way will allow us to unlock greater renewable generation capacity with a massively distributed store for that energy, that is generally parked and therefore potentially available for a high proportion of the time. Future developments towards grid supporting services, such as Vehicle-to-Grid energy export will further yield benefits, not burdens, and provide economic opportunities for businesses and homes whilst decarbonising transport.”

Harold -

Solisco Domestic EV-Ports are made in Germany by GEWA. With a century of experience; successful completion of over 100,000 projects, GEWA has formed a solid business, built on ultimate performance, supreme quality and remarkable attention to detail. With every EV Port delivered, GEWA has demonstrated pure protection and functionality, as well as a strong reputation for longevity with the comprehensive materials used.

In 2016, GEWA granted Solisco sole exclusivity for the UK.

# SOLISCO

Parveen

**Solis = Sun and Coegi = Drive.  
Derived from the Latin meaning of Sun-Drive.**

Solisco was founded with a mission to inspire and support the emerging Electric Vehicle market with innovative solutions that harness the power of the sun.

Having a wealth of experience in running electric vehicles, our team are passionate about making a difference so that everyone can enjoy the true freedom of driving an EV without any compromises. Solisco aims to significantly contribute to the charging infrastructure, in a cleverly engineered way, hosting a variety of high end components to ensure reliability and satisfaction. We are dedicated to promoting the idea that clean energy is the way forward. Unless this infrastructure exists, the shift to EVs will not be as easily adopted, and therefore, the crisis we face today in climate change will continue to grow.

**We offer both Domestic and Commercial Solar EV-Ports..**
